Bushboard Develop Pre-Plumbed Units for Mental Healthcare

Bushboard Washroom Systems are building on their success in the healthcare sector with a range of pre-plumbed units designed specifically for Mental Healthcare applications.

Developed in partnership with Dart Valley Systems (DVS), Bushboard's Ready Plumbed Modules combine a dedicated range of high and low security sanitaryware from DVS with the Bushboard rigid aluminium frame and panel system.

The result is a range of ready plumbed solutions that are precision manufactured from the highest quality materials and are fast and simple to install.

"We have successfully supplied some of the largest Healthcare PFI projects with our HTM 64 compliant Ready Plumbed Modules," comments Kevin Cliffe, Bushboard's Commercial Director. He continued "These units are manufactured exclusively from materials that are impact and water resistant delivering strong, robust solutions. Coupled with the DVS sanitaryware range they really do provide the optimum solution for mental healthcare."

The DVS range of sanitaryware is virtually indestructible making it ideal for safe ensuite. Manufactured from high impact resistant anti-shatter moulded resin and finished with a chemical resistant gel the range is hygienic and attractive to look at.

Jim Griffin, Sales Director of DVS comments, "We are delighted to be working with Bushboard and further enhancing the Bushboard healthcare offer. DVS have led the way in the no-touch sector for many years and we continue to develop and supply innovative products that perform to exceptional standards".
